

DeepResearch Task

Research Question Q : What are the applications and risks of large models in medical diagnosis?

Cognition - Role - Color

NT-Theorist	NF-Innovator
ST-Verifier	SF-Conciliator

Prompt : Analyzing from the perspective of system architecture and risk modeling...

It is necessary to build a three-level analysis framework of 'technology - ethics-regulations' and use SWOT analysis to evaluate medical AI...

Prompt : Focus on innovation...

I give it a 6.5 because it doesn't explore the future possibilities of AI-assisted diagnosis...

Analysis

Rating

Gate = Pass or Fail

(average score ≥ 7.0)

Initial Distribution

Looking for imaginative partners...

Who wants to explore the unknown with me?

Affinity Network

Looking for teammates...

We need to build a solid theoretical framework ... I prefer ...

Form a Cluster

Division of labor...

I can participate in the verification module.

I am concerned about data availability and the rigor of the framework. If systematic risk quantification can be incorporated ...

Final Team Formation

Theorists G_1

Traits : Primarily Introverted, skilled in deep thinking...

Focus: theoretical frameworks, ethics and regulatory analysis...

Innovators G_2
